

PROJECT LIST

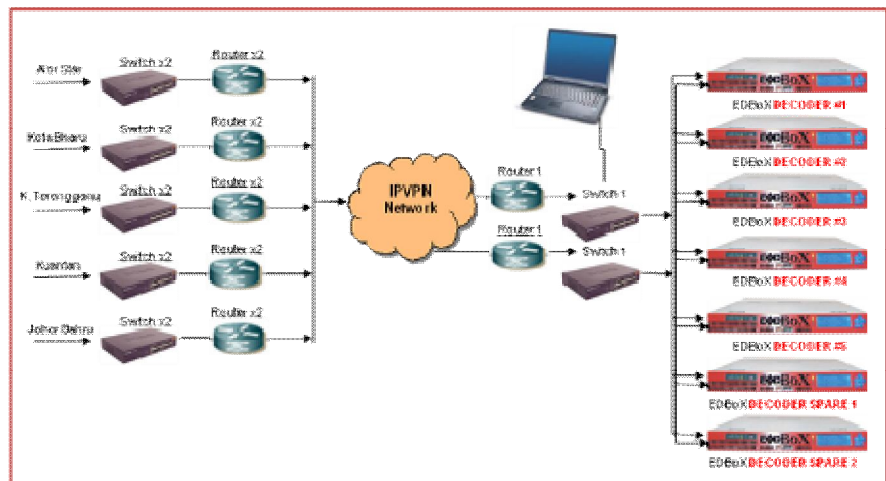

Supply, Delivery, Installation, Testing, Configuration, Commissioning and Management of MPEG4 Audio Video Codec for Berita Ehwal Semasa (BES) of Kementerian Penerangan, Komunikasi dan Kebudayaan Malaysia

H.264-IP based Video Solutions proposal for news contribution network for Telekom Malaysia's Broadcast Sales and Services Division. The solution based on EDBOX platform utilize TM IPVPN network to transport high quality video signals from multiple remotes sites directly to RTM HQ. The bandwidth set by TM is ranging from 4mb/s to 8mb/s, however our solution can perform well under much lower bandwidth i.e 2mb/s. Despite this direct connection, TM would still be able to fully control the systems remotely

This platform is the 1st MPEG4 H.264 video transmission system using IP in Malaysia.

For the 1st phase of the project, 6 sites are identified as follows;

- a. RTM IBC - HQ
- b. RTM Alor Star
- c. RTM Kota Bharu
- d. RTM Kuala Terengganu
- e. RTM Kuantan
- f. RTM Johor Bahru
